

## Information note – COVID-19 situation update July 2020

This is a background document only and does not purport to be a comprehensive discussion of the issues involved. It does not represent the view of the Fair Work Commission on any issue.

This information note provides an update of the current rate of transmission of COVID-19 in Australia, with a particular focus on the current spikes in Victoria and New South Wales (NSW).

The Commonwealth Department of Health provides a daily update on COVID-19 cases from when the first case of COVID-19 was detected in Australia in late January 2020. The data show that:

- As at 22 July 2020, Australia has had a total of 12 896 cases of COVID-19, of which 8653 people have recovered, and 128 people have died.
- 502 new cases have been recorded in the previous 24 hours, the majority of which are from Victoria (484 cases) and NSW (16 cases).<sup>1</sup>

Within the Commonwealth Department of Health, the COVID-19 National Incident Room Surveillance Team has been releasing regular Epidemiology reports since the week of 26 January to 1 February 2020, based on data extracted from the National Notifiable Diseases Surveillance System (NNDSS).<sup>2</sup> The latest of these reports covers the fortnightly reporting period ending 5 July 2020 and based on data available at that time found that 'the national incidence of COVID-19 remained low, with very few cases reported by most jurisdictions'<sup>3</sup>. However, an average of 54 cases were reported per day over the fortnight, more than double the average number reported over the previous fortnight.<sup>4</sup> The majority of current cases over the reference fortnight were from Victoria (87 per cent), with most of these cases being locally acquired. The latest epidemiology report showed that the rate of infection in Victoria was 11.9 per 100 000 population compared with 3.55 per 100 000 population for Australia.<sup>5</sup>

The latest epidemiology report also noted that, for the reporting period ending 5 July:

'...78% of cases were locally acquired, 16% were overseas acquired, and 6% were under investigation at time of reporting. During this reporting period the number and proportion of locally-acquired cases continued to increase, largely due to outbreaks in Victoria. Of all locally-acquired cases, the source of acquisition for 68% of cases was found to be a contact of a case or in a known cluster, 32% were unable to be linked to another case and less than 1% were unable to be linked to any case or cluster but had travelled interstate during their exposure period.'<sup>6</sup>

More recent data in Chart 1 shows the significant increase in new daily cases in Australia and that the majority are in Victoria, as well as a small but sustained level of new daily cases recorded in NSW from late June. Chart 2 highlights the much larger number of cases being recorded in Victoria in July than at the early stages of the epidemic in March.

On 21 June, the Australian Health Protection Principal Committee (AHPPC) released a statement on recent outbreaks of COVID-19 in Victoria, noting that due to the continued growth in confirmed cases overseas and the number of Australians still overseas who may return; as well as sporadic community transmission in Australia, that it remains probable that Australia will experience periodic outbreaks.<sup>7</sup>

On 20 June, the Victorian Government announced that it would not be easing restrictions as initially planned from 22 June because of the increase in cases. It also reimposed some restrictions, such as limiting the number of people you can have at your home to 5 persons and outdoor gatherings to 10 persons. Restaurants, pubs, auction halls, community halls, libraries, museums and places of worship were limited to a maximum of 20 people in any one space until 12 July and businesses including gyms, cinemas, theatres and TABs could remain open with a maximum of 20 people per space.<sup>8</sup>

The continued increase in daily cases (including community transmission) led to a number of areas in Melbourne return to stage 3 (Stay at Home) restrictions from 2 July. Further areas were added on 5 July, and this was extended to all of Metropolitan Melbourne and the Mitchell Shire would return to Stay at Home restrictions for 6 weeks from 9 July. Under stage 3 restrictions there are

only 4 reasons to leave home: shopping for food and supplies; medical care and caregiving; exercise and recreation; and study and work (if it cannot be done from home). Businesses across these regions will also return to Stage 3 restrictions: restaurants and cafes will return to takeaway and delivery services only; beauty and personal services will need to close; entertainment and cultural venues will need to close; and community sport will stop.<sup>9</sup>

On 19 July, the Victorian Government announced that, from 23 July, people living in metropolitan Melbourne or Mitchell Shire must wear a face covering if they leave their home.<sup>10</sup>

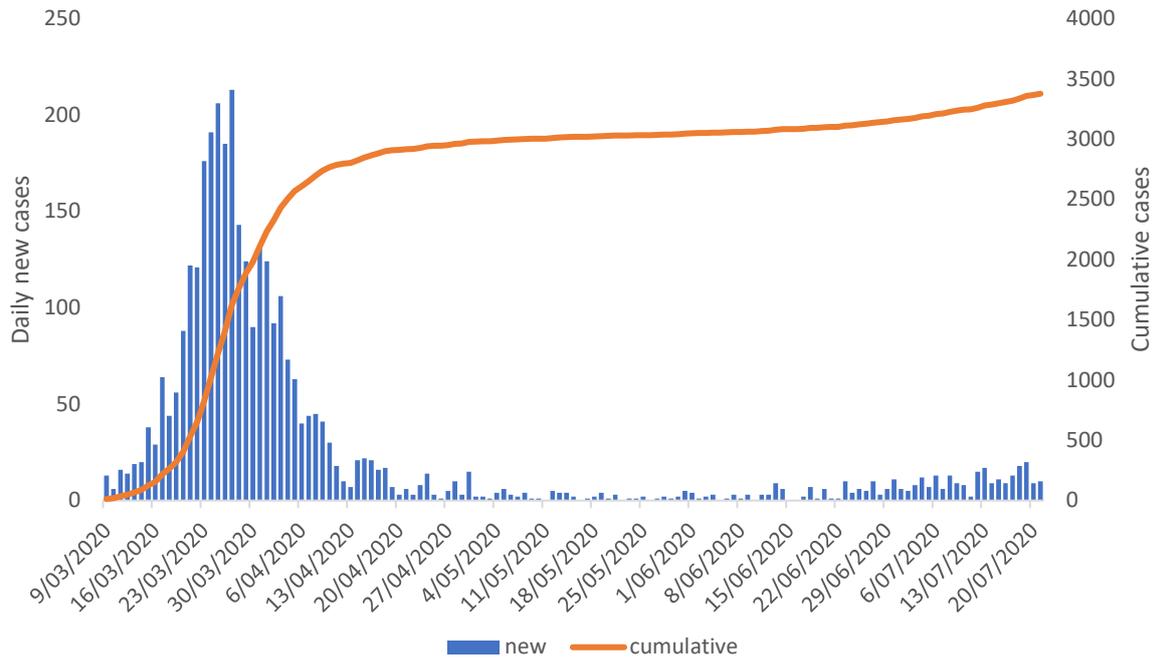

Chart 3 shows the daily new cases and cumulative cases of COVID-19 recorded in NSW. It shows that although the numbers of cases are lower than the peak of the epidemic in March and April 2020, there have been signs of a gradual increase in new daily cases in June and July. In response, the NSW government announced that from 17 July group bookings at pubs are to be limited to a maximum of 10 people (down from 20) and a cap of 300 people inside a venue at any time was introduced. Further tightening of restrictions is due to take effect from 24 July, the 10 people group booking limit extends to restaurants, bars and cafés: a limit of 150 people for weddings and corporate events (subject to the 4 square metre rule); and a limit of 100 people for funerals and places of worship (subject to the 4 square metre rule) will also be imposed.<sup>11</sup>
