

Statistical report—Annual Wage Review 2019–20

Version 12 – 12 June 2020

All Australian Bureau of Statistics (ABS) data in this Report are seasonally adjusted, unless otherwise noted.

All data expressed in \$ units are in nominal terms, unless otherwise noted.

All gross domestic product (GDP) and gross value added (GVA) measures used in this Report are expressed in real terms from chain volume estimates, unless otherwise noted.

1 Economic growth

Chart 1.1: Economic growth, annual and quarterly growth rates

Source: ABS, *Australian National Accounts: National Income, Expenditure and Product, Mar 2020*, Catalogue No. 5206.0.

Chart 1.2: Components of GDP growth, March quarter 2020

Note: Household consumption refers to 'Household final consumption expenditure', Investment refers to 'Gross fixed capital formation', and Public demand refers to 'General government final consumption expenditure'. Contributions may not add to total GDP growth due to rounding.

Source: ABS, *Australian National Accounts: National Income, Expenditure and Product, Mar 2020*, Catalogue No. 5206.0.

Chart 1.3: International comparisons of quarterly GDP growth rates

Source: OECD (2020), *Quarterly GDP (indicator)*, <<http://data.oecd.org/gdp/quarterly-gdp.htm>>; ABS, *Australian National Accounts: National Income, Expenditure and Product, Mar 2020*, Catalogue No. 5206.0.

Chart 1.4: Real net national disposable income, real GDP and the terms of trade, index

Note: Real net national disposable income (RNNDI) takes into account the impact of changes in prices of exports relative to imports, the real impact of income flows between Australia and the rest of the world, and the consumption of fixed capital. Income flows between Australia and the rest of the world are fairly smooth over time and changes tend to have little impact on short-term movements in RNNDI. The consumption of fixed capital tends to stall growth in RNNDI but, for the most part, the impact on short-term movement is small. See ABS, *Real net national disposable income - a new national accounts measure*, Feature article in ABS, *Australian National Accounts: National Income, Expenditure and Product, Dec 2001*, Catalogue No. 5206.0.

Source: ABS, *Australian National Accounts: National Income, Expenditure and Product, Mar 2020*, Catalogue No. 5206.0.

Chart 1.5: Gross value added by industry, average annual growth over decade, growth over year to March quarter 2020 and growth in the March quarter 2020

Source: ABS, *Australian National Accounts: National Income, Expenditure and Product, Mar 2020*, Catalogue No. 5206.0.

Chart 1.6: Gross fixed capital formation share of GDP

Note: All data are expressed in nominal and annual terms. Non-mining market sector excludes Education and training, Public administration and safety, Health care and social assistance and Mining, but includes ownership of dwellings.

Source: ABS, *Australian System of National Accounts, 2018–19*, Catalogue No. 5204.0.

2 Productivity

Chart 2.1: Measures of productivity, indexes—Dec-09 = 100

Note: Labour productivity is measured as real GDP per hour worked. Gross value added measures the value of output at basic prices minus the value of intermediate consumption at purchasers' prices. The market sector includes all industries except for Public administration and safety, Education and training and Health care and social assistance.

Source: ABS, *Australian National Accounts: National Income, Expenditure and Product*, Mar 2020, Catalogue No. 5206.0.

Table 2.1: Measures of productivity, growth rate over the year

Quarter	GDP per capita (% change)	RNNDI per capita (% change)	GDP per hour worked (% change)	GVA per hour worked— market sector (% change)
Dec-09	0.8	−4.3	3.2	3.1
Dec-10	1.3	6.7	−0.3	0.6
Dec-11	1.8	3.9	2.3	3.6
Dec-12	1.0	−1.7	2.4	3.2
Dec-13	0.7	0.2	1.7	2.2
Dec-14	0.6	−1.8	2.0	1.5
Dec-15	1.2	−2.5	−0.1	1.2
Dec-16	1.1	4.9	1.9	2.3
Dec-17	0.9	0.2	−0.8	−0.3
Dec-18	0.6	1.9	0.4	0.4
Dec-19	0.7	1.5	0.4	0.2
Mar-20	0.0	1.0	1.4	1.4

Note: The percentage change is calculated in relation to the corresponding quarter of the previous year.

Chart 2.2: Productivity cycles, annualised growth in the market sector

Note: Multifactor productivity is measured as output per combined unit of labour and capital. Capital deepening is the component of labour productivity growth which is due to the increase in the amount of capital that each unit of labour has to work with. Labour productivity is represented by the numbers above the bars and is the sum of multifactor productivity and capital deepening. Due to rounding, the sum of multifactor productivity and capital deepening may not equal labour productivity.

Source: ABS, *Estimates of Industry Multifactor Productivity, 2018-19*, Catalogue No. 5260.0.55.002.

Note: Wages share is the compensation of employees expressed as a proportion of total factor income. Compensation of employees is defined as the total remuneration, in cash or in kind, payable by an enterprise to an employee in return for work done by the employee. Compensation of employees is not payable in respect of unpaid work undertaken voluntarily, including the work done by members of a household within an unincorporated enterprise owned by the same household. Compensation of employees excludes any taxes payable by the employer on the wage and salary bill (e.g. payroll tax).

Profits share represents the returns to capital in the process of production, and is expressed as total corporation gross operating surplus as a proportion of total factor income. Gross operating surplus is defined as the operating surplus accruing to all enterprises, except unincorporated enterprises, from their operations in Australia. It is the excess of gross output over the sum of intermediate consumption, compensation of employees, and taxes less subsidies on production and imports. It is calculated before deduction of consumption of fixed capital, dividends, interest, royalties and land rent, and direct taxes payable, but after deducting the inventory valuation adjustment. Gross operating surplus is also calculated for general government and is equal to general government's consumption of fixed capital.

Gross mixed income is defined as the surplus or deficit accruing from production by unincorporated enterprises. It includes elements of both compensation of employees (returns on labour inputs) and operating surplus (returns on capital inputs).

The percentage change is calculated in relation to the corresponding quarter in the previous year.

4 Inflation

Chart 4.1: Measures of inflation—Consumer Price Index, underlying inflation and Living Cost Index for employee households, growth rates

Note: Consumer Price Index (CPI) measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditure by the CPI population group (i.e. metropolitan households). The Living Cost Index (LCI) for employee households measures the change in the price of a 'basket' of goods and services which is based on the expenditure of employee households whose principal source of income comes from wages and/or salaries. CPI and LCI data are expressed in original terms.

Underlying inflation is calculated as the average of the trimmed mean and weighted median. The trimmed mean is calculated by ordering the CPI expenditure class components by their price change in the quarter and taking the expenditure weighted average of the middle 70 per cent of these price changes. The weighted median is the price change of the component in the middle of this ordering.

5 Wages

Chart 5.1: Measures of nominal wages growth, quarterly and cumulative growth rates, index

Note: The Wage Price Index (WPI) is an index for total hourly rates of pay excluding bonuses that is unaffected by changes in the quality or quantity of work performed. Average weekly ordinary time earnings (AWOTE) is calculated by dividing estimates of weekly ordinary time earnings by estimates of the number of employees. Ordinary time earnings refer to earnings attributable to award, standard or agreed hours of work. It is calculated before taxation and other deductions such as superannuation. It also excludes payments which are not related to the reference period such as overtime, leave loading and redundancy payments. AWOTE estimates refer to full-time adult employees, where an adult is defined as those who are 21 years or over as well as employees who, although under 21 years of age, are paid at the full adult rate for their occupation. AWOTE data are published half-yearly in May and November and a quarterly series has been derived. AWOTE data are expressed in original terms. Average annualised wage increase (AAWI) measures the average percentage increase in the base rates of pay across federal enterprise agreements approved in each quarter. It does not take into account payments such as allowances, bonuses and increases linked to productivity. The AAWI index is calculated by first deriving a quarterly rate. The C14 and the C10 are minimum award rates set under the *Manufacturing and Associated Industries and Occupations Award 2010*.

Note: These estimates are revised as additional data become available. Particular care should be exercised in focusing on weekly movements in wages, which are subject to a higher degree of reporting variability and revisions.

The Mining industry and Finance industry estimates for the week ending 2 May are based on a higher degree of imputation (given the high proportion of employees paid on a monthly basis) and closely reflect data from the previous week. It is expected this data will be subject to larger than usual revision in subsequent releases.

Chart 6.7: Hours-based underemployment rate and proportion employed part time, by industry, 2018–19

Note: The hours-based underemployment rate is calculated as the number of additional hours sought by underemployed persons expressed as a percentage of the total available hours of labour supply. The total available hours of labour supply are defined as the number of hours actually worked in all jobs plus the number of hours sought by the underemployed persons. Hours sought by unemployed persons are not included. Hours sought but not worked is taken from the Labour Force Survey. Proportion of those employed part-time by industry is calculated at the May quarter 2019.

7 Award reliance

Chart 7.1: Method of setting pay

Note: Awards refers to the proportion of employees in an industry that are paid exactly the award rate and are not paid more than that rate of pay. As defined by the ABS, individual arrangements include registered or unregistered individual agreements and owner managers of incorporated businesses. Estimates of the proportion of employees on awards and collective agreements in 2016 have been revised on the basis of the 2018 conceptual treatment of these methods of payment. Owner managers of incorporated businesses comprised the following proportion of all employees: 2000 = n/a; 2002 = n/a; 2004 = 5.4%; 2006 = 5.1%; 2008 = 5.0%; 2010 = 4.1%; 2012 = 3.3%; 2014 = 3.4%; 2016 = 3.6%; 2018 = 3.8%.

Note: * Only presented for non-managerial employees in 2016 and 2018 as data for all employees by method of setting pay and industry are not available. Estimates of the proportion of employees on awards and collective agreements in 2016 have been revised on the basis of the 2018 conceptual treatment of these methods of payment.

Award reliance refers to the proportion of employees in an industry that are paid exactly the award rate and are not paid more than that rate of pay.

Business entry rate, over year to June 2019	17.5	21.7	16.9	13.4	14.8	15.4
Business exit rate, over year to June 2019	16.7	16.1	12.9	8.7	13.7	12.7
Wage Price Index: percentage growth over the year to March quarter 2020 ^a	2.2	2.0	2.2	3.0	1.8	2.2
Percentage annual wage growth under new collective agreements December quarter 2019	3.2	3.0	2.6	2.4	2.4	2.7
Employment: percentage increase over the year to February quarter 2020	2.8	0.8	–3.6	6.5	–2.4	1.8
Hours worked: percentage increase over the year to February quarter 2020	–1.2	1.0	–5.7	5.3	–3.5	0.5

Note: (a) All industries excludes Agriculture, forestry and fishing; (b) All industries excludes Education and training, Health care and social assistance and some subdivisions of Finance and insurance services. n/a = not available.

The award-reliant industries selected are the five industries with the highest proportion of employees reliant on award rates of pay according to the Employee Earnings and Hours 2018 survey. The WPI and actual hours worked data are expressed in original terms. Employment data are expressed in trend terms.

Entry rates are business entries in the financial year as a proportion of total businesses operating at the start of the financial year. Exit rates are total business exits in the financial year as a proportion of total businesses operating at the start of the financial year.

75 th percentile	1.19	1.20	1.19	1.18	1.18	1.20
90 th percentile	1.56	1.57	1.57	1.57	1.57	1.56
Ratio of selected percentiles to median real earnings						
10 th percentile	0.64	0.64	0.63	0.63	0.63	0.64
25 th percentile	0.77	0.77	0.77	0.77	0.76	0.76

Note: Earnings data for 2014, 2016 and 2018 are based on full-time non-managerial employees paid at the adult rate. Median earnings refer to the level of earnings that divides the distribution into two groups of equal size, one having earnings above and the other below that amount. The median is less affected by outliers and skewed data than the mean.

Source: ABS, *Employee Earnings and Hours, Australia, various*, Catalogue No. 6306.0.

Chart 8.3: C14 rate relative to median earnings of employees in main job

Note: Median earnings are measured in August of each year. Following the amendments to the *Workplace Relations Act 1996* (Cth) taking effect in 2006, the Federal Minimum Wage (FMW) was set at \$12.75 per hour, equivalent to \$484.50 per week. Earnings are for employees including owner managers of incorporated enterprises.

Median earnings from 2004 onwards are taken from the COE survey, with median hourly earnings of adult employees sourced from unpublished COE data. The median earnings data reflect revised estimates as a result of rebenchmarking.

Table 8.4: Nominal disposable income of selected NMW-reliant households

Household type	Disposable income	Change		
	July 2019 (\$pw)	July 2018 to July 2019 (\$pw)	July 2018 to July 2019 (%)	July 2014 to July 2019 (%)
Single adult	663.00	15.45	2.4	14.0
Single parent working FT, 1 child	928.62	20.35	2.2	10.5
Single parent working PT, 1 child	621.21	15.28	2.5	8.5
Single parent working FT, 2 children	1036.42	22.31	2.2	8.8
Single parent working PT, 2 children	729.01	17.24	2.4	6.5
Single-earner couple (with NSA)	838.34	12.44	1.5	8.9
Single-earner couple	677.72	15.78	2.4	13.0
Single-earner couple, 1 child (with NSA)	1031.34	15.93	1.6	7.5
Single-earner couple, 1 child	928.62	20.35	2.2	10.5
Single-earner couple, 2 children (with NSA)	1140.44	18.30	1.6	6.4
Single-earner couple, 2 children	1036.42	22.31	2.2	8.8
Dual-earner couple	1033.40	26.25	2.6	14.6
Dual-earner couple, 1 child	1220.26	26.03	2.2	10.5
Dual-earner couple, 2 children	1328.06	27.99	2.2	8.9
CPI			1.6	8.4

Note: The percentage change in the CPI over July 2018 to July 2019 and July 2014 to July 2019 were calculated with reference to the June quarter. CPI data are expressed in original terms.

Assumptions: Single-earner households earn 100 per cent of the weekly NMW. Single parents working part time (PT) are earning 50 per cent of the weekly NMW rate, those working full time (FT) earn 100 per cent of the NMW. Dual-earner households comprise one partner earning 100 per cent of the NMW, the other earns 50 per cent of this rate. Applicable minimum wage rates (equivalent to the C14 rate) per week are: \$640.90 in July 2014; \$719.20 in July 2018 and \$740.80 in July 2019.

Tax/transfer parameters as at July each year. Disposable income includes all available income transfers, unless otherwise specified. Children are aged 8–12 years and attending primary school. Households paying sufficient rent to receive maximum Rent Assistance where applicable. Single-earner couples are modelled in two scenarios: 1) the non-earning partner is in the labour force and receiving proportional rates of Newstart Allowance (NSA) and 2) the non-earning partner is not in the labour force and therefore not in receipt of NSA. Single-parent households and secondary earners in dual-earner households are not seeking further work and not in receipt of income support.

Households with children receive the fixed value of the Schoolkids Bonus in 2013–2016. Disposable incomes for households with children for 2013 to 2016 reflect the average weekly rate of Schoolkids Bonus instalments in the given year. In 2013 the Schoolkids Bonus accounted for a weekly average of \$7.88 per child in the disposable income for all households with children modelled (excepting dual earner households earning AWOTE as they were not eligible for this transfer). The Schoolkids Bonus was not payable from 2017. Tax/transfer parameters in 2019 are updated for the Medicare levy thresholds legislated by the *Coronavirus Economic Response Package Omnibus Act 2020*.

Chart 8.7: Distribution of low-paid employees across equivalised household disposable income for employee and all households, 2015–16

Note: Low-paid employees refer to all employees whose hourly earnings are below two-thirds of median hourly earnings of full-time adult employees (i.e., those aged 21 years and over). Hourly earnings are calculated as current weekly cash employee income from main job (including salary sacrifice) divided by usual hours worked per week in main job. Usual hours worked in main job are top-coded at 60 hours per week. No allowance for casual loading has been made as casual employees cannot be identified. Employee households are those whose principal source of income is from salary and wages.

9 Real wages and the cost of living

Chart 9.1: Real value of selected minimum wage rates, index

Note: Minimum rates C14, C10 and C4 are those in the *Manufacturing and Associated Industries and Occupations Award 2010* and the L4 rate from the *Professional Employees Award 2010*. For the purpose of the analysis, the L4 rate was calculated by dividing the annual salary for the L4 classification by 365 and multiplying by 7 to get a weekly rate. The L4 rate was the C1(b) rate up until the December quarter 2009.

Table 12.2: Financial stress experienced by low-paid employee households

Financial stress indicators	2014 (%)	2015 (%)	2016 (%)	2017 (%)	2018 (%)
Unable to raise \$3000 in a week for something important	13.7	11.9	11.3	12.3	12.6
Could not pay electricity, gas or telephone bills on time	13.9	14.4	13.6	14.2	15.0
Could not pay the mortgage or rent on time	8.3	8.0	6.5	5.5	7.5
Pawned or sold something	4.3	4.4	5.2	4.3	4.9
Went without meals	5.1	4.2	3.1	2.7	3.8
Could not afford to heat home	2.6	4.2	2.9	3.3	3.6
Sought assistance from welfare/community organisation	3.4	2.8	2.3	2.8	3.6
Sought financial help from friends or family	16.7	15.8	13.5	11.2	13.4
Any stress	31.3	30.9	28.4	27.0	28.2
Low stress (1–2)	21.3	22.4	19.5	19.1	17.7
Moderate stress (3–4)	7.9	5.8	6.8	6.1	7.9
High stress (5 or more incidences of financial stress)	2.0	2.8	2.0	1.8	2.6
Observations	913	896	963	1014	1000

Note: Employee households are those households whose main source of income is from wages or salary. Both partners in a couple family household, the lone parent in a lone parent household and the lone person of a lone person household must report financial stress for that particular household to be considered as such. Observations from multi-family households, other related family households and group households are excluded. Low-paid employee households are defined as those households in the bottom quintile of equivalised disposable household income for employee households. Disposable household income is equivalised using the 'modified OECD' method where each person in the household is given a score (1 for the first adult, 0.5 for subsequent adults and 0.3 for each child under the age of 15) and the income is divided by the sum of these scores.

Table 14.3: 2019–20 Mid-year economic and fiscal outlook, domestic economy forecasts^(a)

	Outcomes ^(b)	Forecasts	
	2018–19	2019–20	2020–21
Real gross domestic product	2.0	2¼	2¾
Household consumption	2.0	1¾	2½
Dwelling investment	0.0	–9	–3½
Total business investment ^(c)	–1.0	1½	6
Mining investment	–9.5	1	12
Non-mining investment	1.6	2	4½
Private final demand ^(c)	1.0	¾	2¾
Public final demand ^(c)	4.1	4¾	3¾
Change in inventories ^(d)	–0.1	0	0
Gross national expenditure	1.6	1¾	2¾
Exports of goods and services	3.9	2½	2½
Imports of goods and services	0.2	½	3
Net exports ^(d)	0.8	½	0
Nominal gross domestic product	5.3	3¾	2¼
Prices and wages			
Consumer price index ^(e)	1.6	2	2¼
Wage price index ^(f)	2.3	2½	2½
GDP deflator	3.2	¾	–¼
Labour market			
Participation rate ^(g)	66.0	66	66
Employment ^(f)	2.5	1¾	1¾
Unemployment rate ^(g)	5.2	5¼	5¼
Balance of payments			
Terms of trade ^(h)	5.6	–4	–8¾
Current account balance (per cent of GDP)	–0.6	–¾	–3¼

Note: The forecasts for the domestic economy are based on several technical assumptions. The exchange rate is assumed to remain around its recent average level — a trade weighted index of around 59 and a \$US exchange rate of around 68 US cents. Interest rates are assumed to move broadly in line with market expectations. World oil prices (Malaysian Tapis) are assumed to remain around US\$64 per barrel. Population growth is assumed to average around 1.7 per cent per year over the forecast period.

(a) Percentage change on preceding year unless otherwise indicated.

(b) Calculated using original data unless otherwise indicated.

(c) Excluding second-hand asset sales from the public sector to the private sector.

(d) Percentage point contribution to growth in GDP.

(e) Through-the-year growth rate to the June quarter.

(f) Seasonally adjusted, through-the-year growth rate to the June quarter.

(g) Seasonally adjusted rate for the June quarter.

(h) The forecasts are underpinned by price assumptions for key commodities: Iron ore spot price assumed to decline towards US\$55/tonne free-on-board (FOB) by the end of the June quarter 2020; metallurgical coal spot price remaining at US\$134/tonne FOB; and thermal coal spot price remaining at US\$64/tonne FOB.

Source: Australian Government, *Mid-Year Economic and Fiscal Outlook 2019-20*, Canberra, p. 18.

Table 14.4: RBA economy forecasts, growth rates

	Dec-19	Jun-20	Dec-20	Jun-21	Dec-21	Jun-22
Gross domestic product	2.2	–8	–6	7	6	5
Unemployment rate*	5.2	10	9	8½	7½	6½
Consumer price index	1.8	–1	¼	2¾	1¼	1½
Trimmed mean inflation	1.6	1½	1¼	1¼	1¼	1½

Note: Percentage changes are for the year-ended. *Average rate in the quarter. The cash rate is assumed to remain at its current level, with other elements of the Bank's monetary stimulus package, including the 0.25 per cent target for the 3-year government bond yield, assumed to remain consistent with current settings. Other technical assumptions include the TWI at 57, A\$ at US\$0.64 and Brent crude oil price at US\$35 per barrel. Shaded regions are historical data.

Rounding varies: Activity to the nearest whole number; unemployment to the nearest half point; wages and prices to the nearest quarter point

17 Business surveys

In the Annual Wage Review 2015–16 Decision, the Expert Panel noted that:

Official statistics on the situation of small business come with a substantial time lag. We accept that in these circumstances, the information provided by business surveys is useful. In particular, we note the assessment by the Australian Government and the RBA that information from the main business surveys (by ACCI, NAB and Sensis) have proved to be quite reliable predictors of output and employment growth. [2016 FWCFB 3500 at para. 298]
